Education

Bachelor of Technology, Computer Science
Maharaja Surajmal Institute of Technology, CGPA: 9.41 **2019 – 2023**

Senior Secondary Education
Don Bosco School, Percentage: 96.8% **2019**

Experience

Senior Software Engineer **July 2025 – Present**
Aviso AI *Python, Django, Prefect, Kubernetes (EKS), Databricks, MongoDB, Claude API, Docker, AWS*

- Designed and built an org-wide **Job Orchestration Platform** on **Prefect** and **Kubernetes (AWS EKS)** in ∼**2 weeks**; authored the **HLD and LLD**, decoupling job logic from orchestration and shipping the orchestrator as an installable **Python package**.
- Migrated ad-hoc **Databricks notebook** jobs into a dedicated jobs repository, **cutting compute costs by ∼33%** and driving adoption across 3 teams (Data Engineering, Implementation, Solutions Engineering).
- Engineered a swappable execution layer and delivered an **AWS Step Functions + SQS** POC as a fallback backend, reducing a future runtime migration to a single adapter change.
- Prototyped **Generative AI (LLM)** workflows with **Claude API**, **LangChain**, and **n8n**, automating deal summaries and CRM insights through prompt engineering; evaluated each for production integration.
- Built **Pipeline Pulse**, a scheduled analytics job delivering daily deal insights and trends in place of ad-hoc reporting; migrated cron-based batch jobs to **Databricks Workflows**, improving scheduling reliability and failure recovery.
- Refactored 2 microservices into modular components, **cutting dashboard load time by 90%** (20s to under 2s); migrated services from **uWSGI to AWS Fargate** and built **Self-Serve Admin** modules, reducing support overhead.
- Core & Platform team member; delivered backend integrations, enhancements, and custom requests for 30+ global enterprises (Lenovo, NetApp, Nutanix, BMC).

Software Engineer **August 2024 – June 2025**
Zopper *Python, Django, Node.js, Docker, MySQL, Microservices*

- Delivered warranty backend solutions for 6 enterprise partners (Samsung, Xiaomi, Godrej, Hitachi, ICICI, Reliance).
- Engineered partner API integrations in **Django REST Framework**, enabling bulk processing of **50,000+ records** with structured logging for end-to-end traceability.
- Integrated ICICI Bank payout APIs, processing **10,000+ encrypted transactions/month** with live monitoring.
- Containerized 4 microservices with **Docker**, standardizing CRM development, testing, and integration environments.

Software Engineer **August 2022 – August 2024**
TravClan *Node.js, Python, Django, MySQL, MongoDB, REST APIs*

- Developed Hotels search-to-booking flows on TravClan's B2B travel portal (Node.js), supporting a **7x GMV increase**.
- Shipped Resume-Bookings, letting users pick up incomplete hotel bookings where they left off and improving the **Search-to-Book ratio by 40%**.
- Integrated the Hotels microservice into the Holidays system for real-time booking and live inventory in holiday packages.
- Optimized REST APIs across the Hotels, Flights, and OnTrip apps (Node.js, Python) and resolved production incidents.

Projects

Multi-Tenant Job Orchestration Platform **Aviso AI**

- Event-driven job runner on **Prefect + AWS EKS**: **Redis** queues feed ∼200 parameterized deployments serving thousands of customer-job runs, each in an ephemeral pod with per-customer concurrency limits and auto-retries.

AI Deal Insights POC **Aviso AI**

- Prototyped an LLM-based pipeline health tool on the **Claude API (Anthropic)** that auto-summarizes deal status and flags at-risk accounts from CRM data; evaluated for production integration.

Hotel Reviews Aggregator **TravClan**

- Built a **Python** service aggregating hotel reviews from global suppliers such as **Expedia** and **Hotelbeds** normalizing each supplier API into one schema behind pluggable adapters so new suppliers can be added with minimal code changes.

Technical Skills

Languages	Python, JavaScript, Java Core, SQL
Frameworks	Django, Django REST Framework, Node.js, Express.js, RESTful APIs, ReactJS
AI & Automation	Claude API, Claude Code, LangChain, n8n, Generative AI, LLMs, Prompt Engineering, AI Agents
Orchestration & Data	Prefect, Databricks Workflows, AWS Step Functions, MongoDB, MySQL, Redis, ELK Stack
DevOps & Cloud	AWS (EKS, Fargate, SQS), Kubernetes, Docker, CI/CD, Jenkins, Splunk, NGINX, Git
Concepts	Microservices, System Design (HLD/LLD), Distributed Systems, Multi-tenant Architecture
